

prairie process

1

ASSESSMENT
We assess your site's conditions and make a plan.

2

KILL VEGETATION
We remove all current vegetation over 3–12 months.

3

INSTALLATION
We sow seeds and install erosion control.

4

1ST GROWING SEASON
We keep everything cut low. Your prairie will look patchy and sparse as it begins to establish.

5

2ND GROWING SEASON
We cut less frequently for one more season if necessary, based on an assessment of weed pressure.

6

3RD GROWING SEASON
Most prairies are established by now. You'll see lots of life and beauty!

7

4TH GROWING SEASON AND BEYOND
Your prairie will only need to be cut once a year.

8

PAYMENT TERMS

- 50% due after signing the proposal
- 25% due at installation
- 25% due at project completion
